

ST10456450_IMAD5112
Live Weather Forecast App

HOW MY APPLICATION WORKS

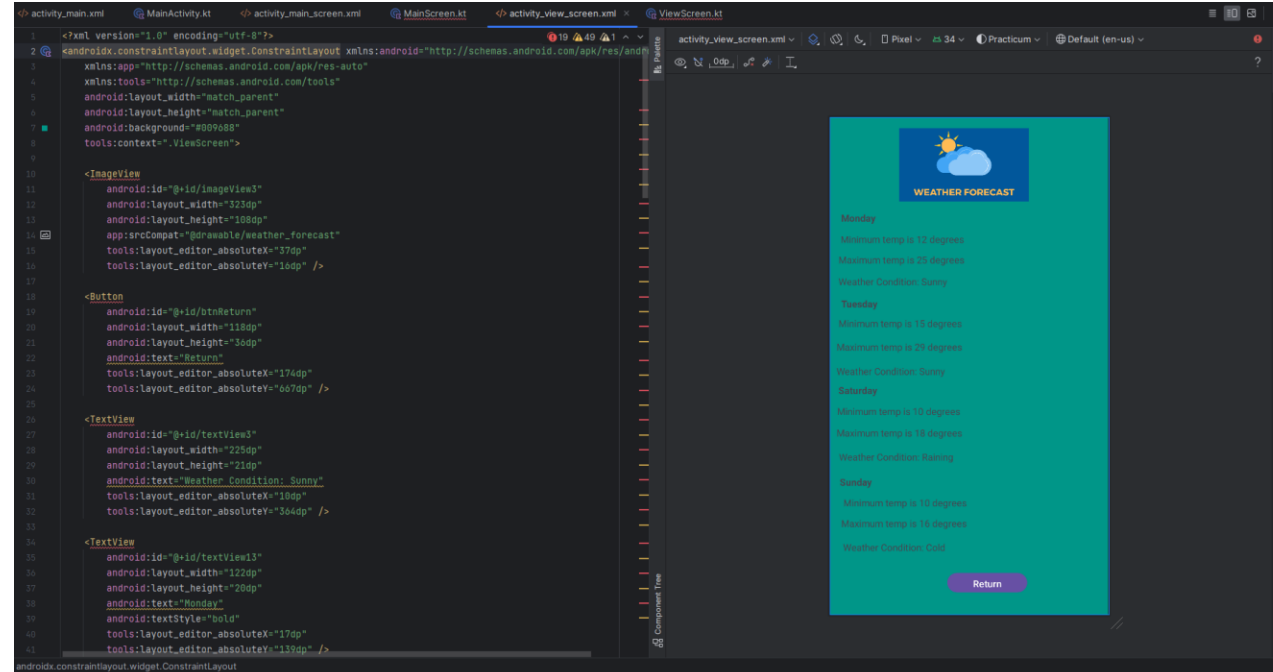

- Once the user has opened the application he or she will be directed to the welcome screen shown below.

- The user will then have to input their student number, name and surname.
- Two buttons will be at the bottom and the user can either press exit to close the app or next to view the average temperature
- Once the user clicks on next he or she will be able to navigate the main screen shown below.

- The user will be able to see the minimum and maximum temperatures of a particular weekday inputted.
- The weather condition of that particular day will also be displayed
- The user will have three buttons as options to navigate the application.
- The back button will take the user back to the welcome page, the clear button will clear information of the day inputted by user and the display button will direct the user to a detailed screen like the one below.

- The user will be able to see a clear and detailed explanation of the weather forecast which will include the degrees celcius of each day and the weather condition on the day.
- The user will have an option to go back to the main screen.
